

- 1 Reuse the flight route component here. Extend the class if additional function is needed.
- 2 If a route is selected on the right-hand side, clicking on this button will append the selected route to the left-hand side. If no route is selected on the right-hand side, clicking on the button will show a notification saying: "Please select route to assign."
- 3 If a route is selected on the left-hand side, clicking on this button will remove the selected route from the left-hand side. If no route is selected on the left-hand side, clicking on the button will show a notification saying: "Please select assigned route to remove."
- 4 Selecting a route on either side of the list will automatically select the matching route(s) on the other side. I.e.: Selecting an assigned route will auto-select the corresponding route in the "database" and show the route on the map. Selecting a route in the "database" will auto-select one or more (if assigned multiple times) assigned routes.
- 5 Users could drag and drop the routes to reorder the assignment.
